**September 3, 2018**

**Chordoma** is a slow growing, relentless bone cancer that occurs in the head and spine in people of all ages. Chordoma is typically resistant to chemotherapy and radiation, and is prone to multiple recurrences. The average survival after diagnosis is 7 years; a statistic we are determined to improve.

**Our Mission** is to improve the lives of chordoma patients by rapidly developing effective treatments and ultimately a cure for this devastating disease. We lead a coordinated international research effort to accelerate a cure, while improving the diagnosis, treatment, and quality of life for people affected by chordoma. We serve as a bridge between patients, doctors, researchers, drug companies, government and funding agencies, representing the interests of those with chordoma, and instilling a sense of urgency in the treatment development process.

*A portion of the proceeds will benefit the Chordoma Foundation, an organization the Galluccio family strongly supported.*
