Expert Recommendations for the Treatment of Recurrent Chordoma

Observation with regularly scheduled imaging

Multiple tumor locations or isolated recurrence not treatable with high-dose radiation

Stable or slow-growing disease with no symptoms

Progressive disease and/or symptoms present

TREATMENT OPTIONS
- Debulking surgery
- Low-dose radiation
- Radiosurgery
- Ablative therapy (e.g., radiofrequency ablation, cryoablation)
- Systemic therapy, including clinical trials

Comprehensive palliative and supportive care
