

**UNCOMMON CAUSE
UNCOMMON PROGRESS
UNCOMMON OPPORTUNITIES**

Chordoma is a rare and difficult to treat cancer that grows in the bones of the skull and spine, and affects people of all ages.

>25,000
chordoma patients
worldwide

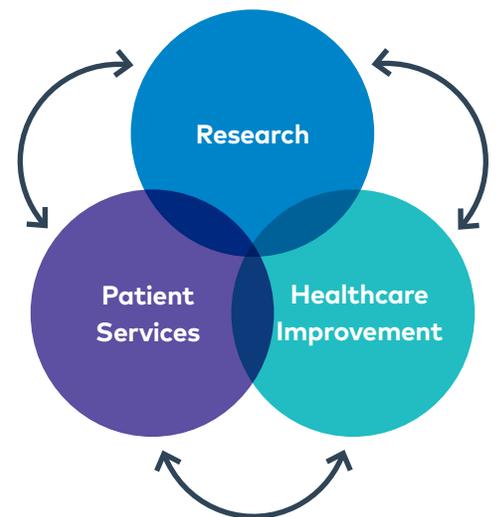

The Chordoma Foundation is a nonprofit organization dedicated to:

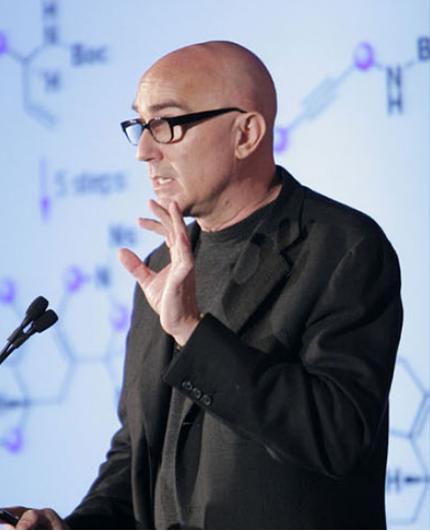

- » Improving the lives of those affected by chordoma
- » Leading the search for a cure

We envision a future in which everyone affected by chordoma is able to overcome the disease and maintain their quality of life.

To achieve this vision, we invest in three mutually reinforcing program areas: Research, Patient Services, and Healthcare Improvement.

**Chordoma is a solveable problem.
We are leading the movement to solve it.**

“The progress the Chordoma Foundation has catalyzed in the span of 10 years is unprecedented, and is charting a path for other diseases.

It serves as an example of what's possible when the right ideas, the right people, and the right resources come together to tackle a rare disease, and it illustrates the power of patient involvement.”

- Dr. Stuart Schreiber, Co-Founder, Broad Institute of Harvard and MIT

Over the past decade, we've created a **global movement of patients, families, doctors, and researchers** working together to improve the odds for everyone affected by chordoma.

But what gives us the most hope is that the ground we've gained thus far has made it possible for patients to begin benefitting from advances in research in a matter of **years rather than decades.**

We've come a long way in 10 years.

BETTER TREATMENTS

7

Therapies entering clinical trials – 10 by 2020

25

Possible drug targets identified

350

Researchers studying chordoma worldwide

BETTER EXPERIENCES

7,000

Patients and caregivers served

150

Vetted doctors in the Doctor Directory

14

Community Conferences worldwide

BETTER CARE

1st

Consensus guidelines for the diagnosis, initial treatment, and recurrence of chordoma

400

Physicians treating chordoma around the world

But more effective treatments and cures are still URGENTLY NEEDED.
